THE THEORY OF RELATIVITY.

More than 100 years ago, the Big Bang Theory of origins was waiting to be presented to the world. But there was a problem. In an ever expanding universe, with distant galaxies fleeing away from us at the speed of light (and more!), how could their light get back to us here on Earth? To answer this question, the Theory of Relativity was developed.

This theory said that light still came back to us at the speed of light, no matter how fast galaxies were fleeing away! That relative to us, the speed of light was always constant.

The Big Bang Theory was then put forward, and was supported by the Theory of Relativity, and all went along nicely for about a century.

THE BIG BANG THEORY DISPROVED.

In 2011 it was shown that the universe is not expanding. (See reference 1) Galaxies are not moving away, and never were. The universe is just...well...out there. Going nowhere. This put paid to the Big Bang Theory.

The Theory of Relativity is not needed at all in a static universe. The Theory of Relativity is therefore Redundant.

GRAVITY AND TIME.

But wait! you will say. Relativity further says that gravity slows time! Isn't that a proven fact?

An early triumph of Relativity was that it "explained" an observed lateness in the predicted motion of the planet Mercury. Relativity suggested that this was because time was slowed for Mercury, because it orbits near the Sun. The immense gravity of the Sun was said to slow time for Mercury, so that Mercury's motion was observed later than calculated using Newton's Laws of motion.

However, it has recently been shown that a slowing speed of light is causing the lateness in observations of Mercury. (See reference 2) This slowing speed of light has not been allowed for in the past. Relativity is Redundant here also.

THE PIONEER ANOMALY.

Pioneer, a deep space probe, is at such a distance from the solar system that its radio signals take 10 hours and more to reach us! (See reference 3) The radio signals seem to indicate that the Pioneer probe is nearer to Earth than it should be.

Once again, Relativity was suggested to explain this supposed "distance deficit", but it is perfectly explained by a side effect of slowing light speed. No Relativity needed.

(Note that radio signal speed is slowing, just as light is slowing. Both are electromagnetic rays.)

ATOMIC CLOCKS.

The slowing speed of light affects other physical "constants". One of these is the rate of radioactive decay. Radioactive decay slows at the same rate as slowing light speed.

Atomic clocks are radioactive clocks.

Atomic clocks are slowing down.

(Light generation itself is actually decaying, getting weaker and weaker, step by step, and causing the slower speed of light.)

ATOMIC CLOCKS AND TALL BUILDINGS.

As a proof of Relativity, atomic clocks are placed in the top, and in the bottom, of tall buildings. The clock at the top is said to run faster than the ground floor clock. Gravity higher up is less, lower down is more. Time is said to go faster up top, and slower lower down. Relativity proven?

Well, no. Air pressure is less at the top of the building. The speed of light is faster in a vacuum than in air, and so it is faster in less air pressure than in more. Faster light, faster radioactive decay, faster atomic clock at the top.

Relativity? Or air pressure? You choose.

TALL BUILDINGS AND RELATIVITY.

The Earth is revolving steadily Eastwards at around 1000 miles per hour. Tall buildings are revolving with the Earth. If time really was going faster at the top of tall buildings, these buildings would develop a lean towards the East as the upper parts of the buildings moved on ahead of the ground floor! This does not happen. Relativity is not reality.

CONCLUSIONS.

In a non expanding, stationary, static universe, Relativity becomes Irrelevant.

Furthermore, the seemingly delayed movements of Mercury, and the Pioneer distance mystery, are well explained by slowing light speed.

And real skyscrapers do not lean towards the East. Gravity does not slow time, as was proposed by the Theory of Relativity. Relativity is Redundant.

CLOSING REMARKS.

For more information on the slowing speed of light (298,030.80 km/sec in 2018), and the non expanding universe (no big bang), and quantization in radioactive decay rates (organised decay!), see...
